Continuation of Substance of Interview including description of the general nature of what was agreed to if an agreement was reached, or any other comments: Applicant's representatives suggested claim language as to forming the TFTs from the same layer thus achieving better uniformity. Examiner indicated that Asai also taught desire for TFT uniformity such that the suggested language would not overcome the rejection. Representatives also pointed to the language of claim 25 as to the cross arrangement, as shown in fig. 11A, arguing it is not taught by the prior art or Asai. Examiner agreed it was not immediately apparent that either reference taught the arrangement and it would be considered further when a response is filed. Finally, representatives inquired about restriction of potential additional claims drawn to the analog transistors having dimensions twice that of the digital transistors. Examiner indicated that on first blush, such claims would likely not be restricted as a separate species as they did not appear mutually exclusive.
